A computer network is a collection of interconnected devices (computers, servers, routers, switches, etc.) that communicate with each other to share data, resources, and services. Networks can be classified based on their size and scope, such as Local Area Network (LAN), Wide Area Network (WAN), Metropolitan Area Network (MAN), and Personal Area Network (PAN).

2. What are the main types of computer networks?

- **LAN (Local Area Network):** A network confined to a small geographic area like an office or building.
- **WAN (Wide Area Network):** A network spanning large geographical areas, often made up of multiple LANs (e.g., the internet).
- **MAN (Metropolitan Area Network):** Covers a city or campus area, larger than LAN but smaller than WAN.

- **PAN (Personal Area Network):** Connects personal devices within a very small area, typically via Bluetooth or Wi-Fi.

3. What are the OSI and TCP/IP models?

The OSI (Open Systems Interconnection) model is a conceptual framework with seven layers that standardizes the functions of a telecommunication or computing system. The TCP/IP model is a more practical, four-layer suite used for internet communication.
