Question 1:

Explain Newton's First Law of Motion and give an example.

Answer:

Newton's First Law of Motion states that an object at rest remains at rest, and an object in motion continues in motion at a constant velocity unless acted upon by an external force. This law is also known as the law of inertia.

Example: A book resting on a table remains stationary until someone pushes it. Similarly, a rolling ball on a smooth surface will keep rolling unless friction or another force slows it down.

A car accelerates from 0 to 20 m/s in 5 seconds. Calculate its acceleration.

Solution:

Using the formula:

$$a = (\text{final velocity} - \text{initial velocity}) / \text{time}$$

$$a = (20 \text{ m/s} - 0 \text{ m/s}) / 5 \text{ s} = 20 / 5 = 4 \text{ m/s}^2$$

Answer: The car's acceleration is 4 meters per second squared.
